

## Date Code Decipher Method

### WEG

All WEG motors and the date of their manufacture are identified by the following method. The identification information will be on the motor nameplate located in the center section on the far left of the nameplate.

The manufacturer number consists of seven characters as follows:

1. The first two characters represent the Day of Manufacture.
2. The following three characters represent the Month of Manufacture.
3. The final two characters represent the Year of Manufacture.

**Example: 06 JAN 11**

The diagram shows the date code '06 JAN 11' with lines connecting it to labels: '06' is connected to 'Day', 'JAN' is connected to 'Month', and '11' is connected to 'Year'.
